UPDATE

Innovations & assortment changes

EN December 2017

Life&Mobility
INSPIRED BY LIFE

Update is an information sheet in which Life & Mobility brings you up to date on the latest (product) news

Product range changes as of 1 January 2018

Our product range is always changing. The following pages give a summary of the product range changes and innovations of the past six months, as well as what is coming in the future. The adjusted price lists for 2018 can once again be accessed by logging in to the website. Lost login information? Not a problem, we'll be happy to reissue this information! Please contact your advisor from the sales office staff via verkoopbinnen@life-mobility.com.

COMING SOON!

Custom made for you: the MyPlus

We are receiving more and more requests for custom-made alterations to our products, to meet the requirements of individual customers. That is why we have improved our internal customisation process and have transformed the Plus into a basic wheelchair for adaptations, renamed it the MyPlus and made it available in Ocean Blue (RAL5012) as standard.

The most important product changes to the 'basic' model of the MyPlus compared to the Plus are: the back tubes, the back angle hinge. These will be the same as for the Roxx and the Canto Nxt, as will the optional anti-tipping system. The frame is also being fitted with 3 wheel positions as standard and the leg supports are being strengthened. The MyPlus is available in all RAL colours, though this will of course affect delivery time and price. This also applies for spare parts. The product overview for the MyPlus shows examples of the various possibilities.

Spare parts for the 'old' Plus will still be available. These can be found in the old product range in our parts catalogue.

A longer Canto Nxt

We are getting taller and broader, and we are living longer. As a result, user needs and thus our products are changing. For this reason, the Canto Nxt now has an additional seat depth option of 56 cm. The seat depth range of the Canto Nxt now equals that of the Roxx. The ZD 56 is therefore available in the price list and when you order a seat depth adjustment set, from now on you will always get the long version!

With certain models of the Canto Nxt manual wheelchair, the sides could conflict with the rear wheels. We have solved this by making the side holder straight rather than offset. The side can be moved inwards and outwards by moving two plastic sockets.

CANTO nxt

Manoeuvring with the Aura

Safe push support with an optional manoeuvring lever for the Canto Nxt and Match push wheelchairs. That is now a possibility with the new option on the Aura.
This allows you to easily drive up to a table or manoeuvre in small spaces without turning on push support. You can now do this with an easy to use lever. This optional manoeuvring lever makes the Aura the safest option on the market because the wheels automatically lock if the system is turned off or the battery is dead.
This option will therefore soon be available on the prices lists for the Match and Canto Nxt push wheelchairs.

Mid Lectus

With the Mid Lectus we have filled the gap in our product range where a high-end mid wheel drive wheelchair was missing. The advantages of the Lectus seating system, many connection options with regards to control, and the handling of a mid wheel drive wheelchair. That is the new Mid Lectus.

Solo/Mezzo/Primo

In September, we organised a special dealer day, during which we welcomed several of our mobility scooter dealers at our premises in Doetinchem.

In addition to a tour of Life & Mobility, we consulted with our dealers about the best ways to get more out of our product range.

Base on these consultations, as well as other market feedback, we are currently working hard on:

- Improvement of the Solo's lighting
- A universal accessory holder for the Solo, Mezzo and Primo
- A user-friendly key
- The steering rubbers and mirror mounting of the Mezzo and the Primo
- A Quickstart in which answers are given to the most important questions regarding batteries, maintenance, etc.

Target introduction date is March 2018.

Comfort Leg Support

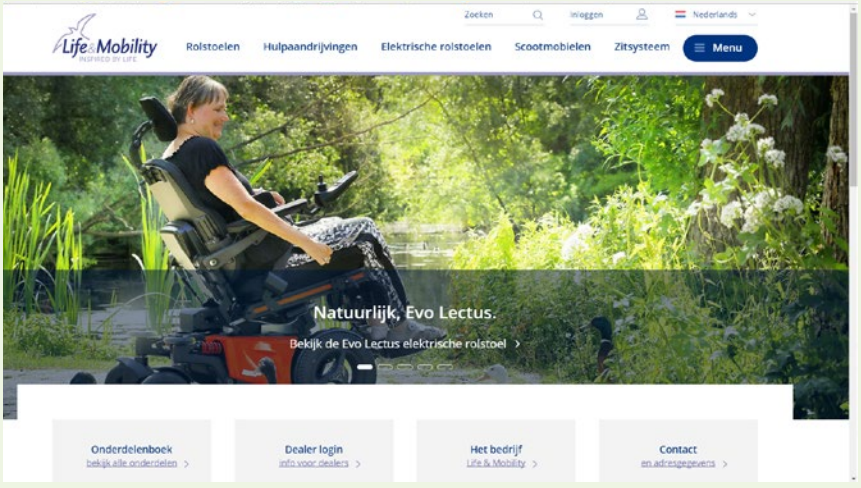
The new calf plate clamp on our Comfort Leg Support has been introduced. This allows you to easily adjust the calf plate to the required height. And all that for the same price! We have already received a lot of enthusiastic reactions. Do you still have the old version? The old components are still available from our parts catalogue.

New upholstery

A new stretch upholstery is being introduced for the Comform Xtra, Invito and Tracix backrests for the Matrixx seating system. In order to guarantee the durability of our stretch upholstery, we have chosen for different upholstery. In several months, the first backrests will be fitted with our new upholstery.

P-shaped armrest

Due to regular recurring demand from the market, we have now made the P-shaped armrest available for the Canto Nxt and Match push wheelchairs.



New website

The champagne has been chilled, the countdown can begin. 10, 9, 8, 7, 6, 5, 4… the new Life & Mobility website is on the way!

We can tell you all about it, but it's much more fun for you to discover it yourself. You can do this as of the new year. We are very proud of the result!
